

## Installation instructions for gold and platinum borders

Precious metal glazes are low-temperature glazes, applied in the third firing and to some degree sensitive during production:

- to scratching and severe frictional pressure
- to acidic and alkaline cleaning agents

Please note the following installation instructions:

**Before installing the material, check that it is fault-free.**

### Installation

The goods you have in your hands are goods of the 3rd coating generation and no longer need to be equipped with a protective strip.

### Jointing

Joint the wall covering first, around the borders.

Remove the excess jointing material immediately before it becomes touch dry using a soft cloth or a sponge and a lot of water.

Do not allow the jointing material to become touch dry on the border!

### Cleaning

Clear water or a neutral cleaning agent and a soft cloth are normally used to clean the borders.

Please do not use any acidic or alkaline cleaning agents, cleaning agents with abrasive components (scouring milk, etc.) or a high-pressure cleaner.
